

# VERTICAL SKID FRACKING TANK SIZE 500 TO 21,000 GALLONS

Standard tanks have a conical top to shed rain, snow and debris and either a flat, skirted or un-skirted cone, or sloped bottom. Nozzle fittings and cleanout are standard or you can specify the number, size and location of fittings for piping and manways for access. Tanks are coated with exterior primer or you can request a tough reflective exterior coating and/or specialized interior linings.
